

⇒ Build LLM from scratch: standard

CS.
2336

Lecture #1: Tokenization.

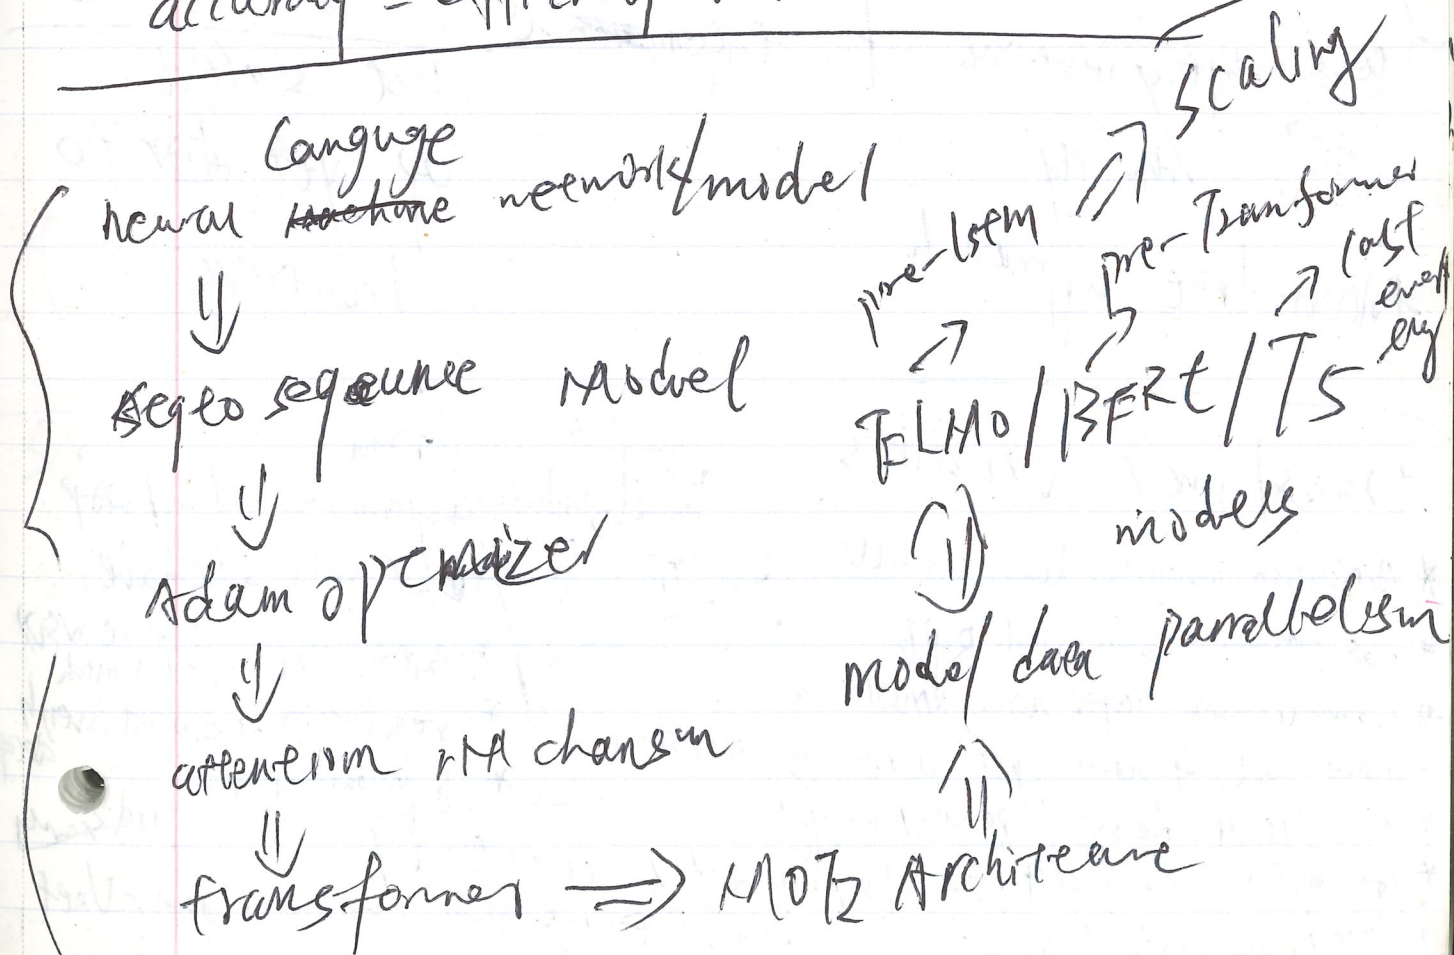

mechanics

- ① How things work (what a Transformer is, how parallelism leverage GPUs)
- ② Mindset: sequencing the most of hardware/scaling laws
- ③ Innovations: ^{memory} what data and modeling laws
- ④ Moments: ^{memory} used for decision

The bitter lessons

⇓ algorithms that scale is what matters

accuracy = efficiency x resources
